DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 19-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Nozaki et al. (U.S. Patent No. 5,247,129, hereafter '129).
3. Claim 19: '129 teaches a pianoforte instrument that includes a vibrating sound board and a plurality of keys (Fig. 1), comprising: individual sensors associated with each key (7a-g) for delivering the actuation information of the actuated key to a tone control device (7ho); a tone control device (7ho) receiving the data of the individual keys actuated to, in turn, select from a memory device the memorized data of the individual harmonics for the corresponding tone actuated (7hp); a memory device for compiling data corresponding to a desired sound characteristic including a partial tone spectrum for each selected tone in dependence on the measured values of each sensor (7he); and a tone modification device coupled from the tone control device for controlling the composition of the partial tone spectrum (7hf); a control module (7ho) for controlling the tone modification device so that a tone building process may be individually selected and combined in order to be delivered in real time to the vibrating sound board and also to control an amplifier (7hg) with respect to the volume of vibrating energy to be

delivered into the vibrating sound board; and an amplifier (7hg) amplifying the signals received from the tone modification device in order to deliver the amplified signal to the vibrating sound board.

4. Claim 20: '129 teaches that the memory device includes a tone sample memory (7hp), the tone control device receiving the key actuation signals from the sensors and using the sensor data signal to address data from the tone sample memory, the tone sample memory output representing selected harmonics that are generated in real time (Figs. 3-5).
5. Claim 21: '129 teaches that signals issuing from the amplifier are converted into mechanical vibrations and introduced into the vibrating sound board (7i).
6. Claim 22: '129 teaches a device for delivering vibration energy comprising one or more driver systems (7hh) at the vibrating sound board (7i).

Allowable Subject Matter

7. Claims 2, 3, 6-8, 13-18, & 23-26 are allowed.

Response to Arguments

8. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
